GitHub – Create Account

1. Go to <https://github.com/>
2. Enter your e-mail and click on “sign up for GitHub”

A dark blue banner with white text. The main headline reads "Where the world builds software". Below it, a subtitle says "Millions of developers and companies build, ship, and maintain their software on GitHub—the largest and most advanced development platform in the world." At the bottom, there is a white input field labeled "Email address" and a green button labeled "Sign up for GitHub".

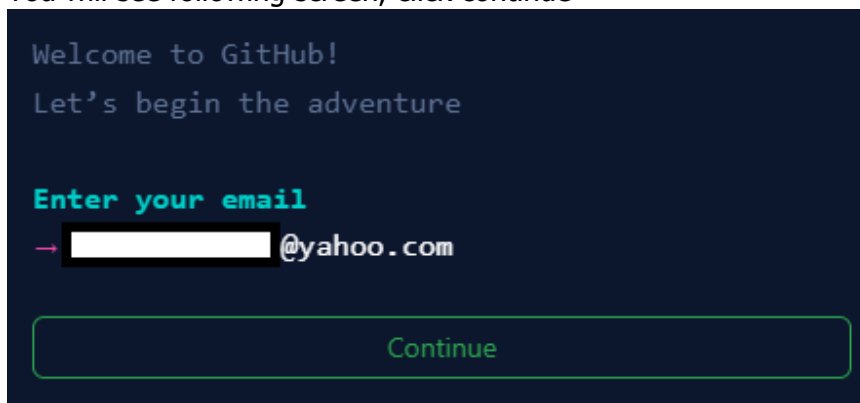

Where the world builds software

Millions of developers and companies build, ship, and maintain their software on GitHub—the largest and most advanced development platform in the world.

Email address

Sign up for GitHub

3. You will see following screen, click continue

A dark blue screen with white text. It says "Welcome to GitHub!" and "Let's begin the adventure". Below that, it prompts "Enter your email" with a red arrow pointing to a white input field. The text "@yahoo.com" is visible next to the input field. At the bottom, there is a green button labeled "Continue".

Welcome to GitHub!

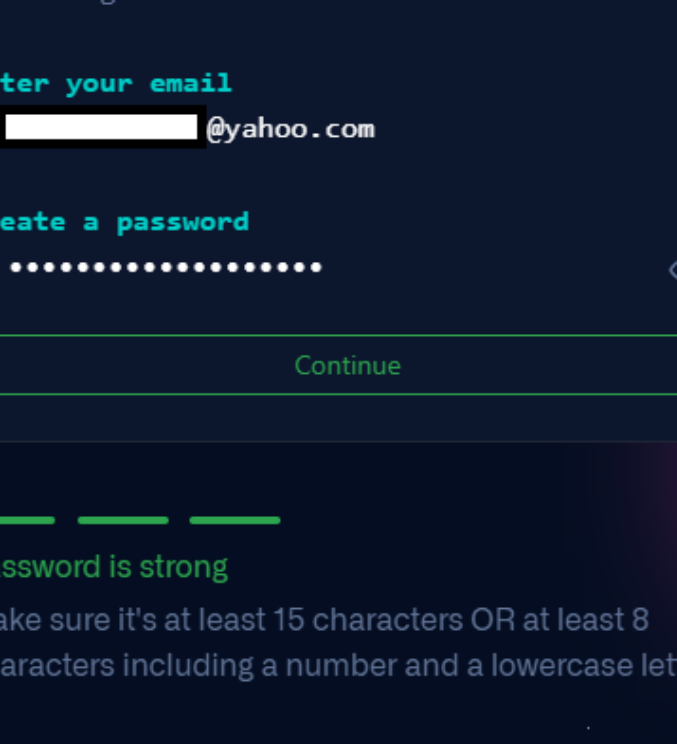

Let's begin the adventure

Enter your email

→ @yahoo.com

Continue

4. Enter your password and click continue (read the privacy and terms of service!)

Welcome to GitHub!

Let's begin the adventure

Enter your email

✓ [redacted]@yahoo.com

Create a password

→ ••••••••••••••••••••

Continue

Password is strong

Make sure it's at least 15 characters OR at least 8 characters including a number and a lowercase letter.

By creating an account, you agree to the [Terms of Service](#). For more information about GitHub's privacy practices, see the [GitHub Privacy Statement](#). We'll occasionally send you account-related emails.

5. Enter user name and click continue

6. Verify that you are human!

Verify your account

Please solve this puzzle to verify that you are human
Click "Start puzzle" to continue

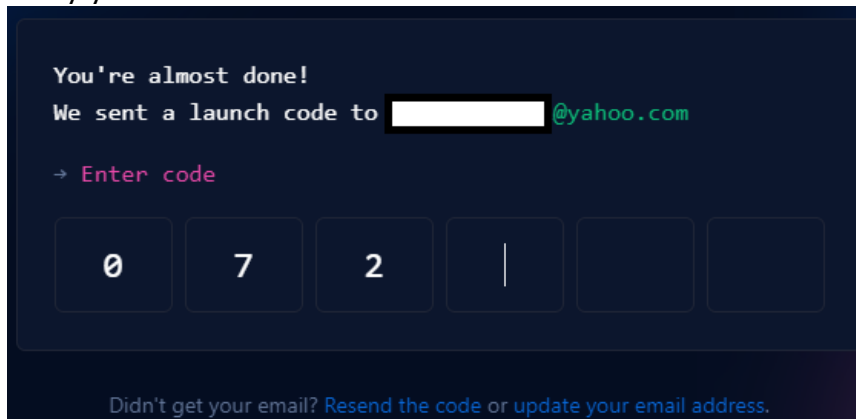

Start puzzle

⌂ 🔊

7. Click on create account

8. Verify your e-mail is valid

9. Specify your team size and click continue

How many team members will be working with you?

This will help us guide you to the tools that are best suited for your projects.

Just me	2 - 5	5 - 10
10 - 20	20 - 50	50+

Are you a student or teacher?

Student	Teacher
---------	---------

Continue

10. Specify features (select all)

- Collaborative coding
- Automation and CI/CD
- Security
- Client Apps
- Project Management
- Team Administration
- Community

11. Continue with free option (for now)

GitHub – Create Repository

Because this is a documentation project I will not check “Add gitignore”

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Owner *

Repository name *

Great repository names are short and memorable. Need inspiration? How about [expert-octo-guide?](#)

Description (optional)

How-to software installations, configurations/best practices for students and technology enthusiasts

☐

Public

Anyone on the internet can see this repository. You choose who can commit.

☒

Private

You choose who can see and commit to this repository.

Initialize this repository with:

Skip this step if you're importing an existing repository.

☒ Add a README file

This is where you can write a long description for your project. [Learn more.](#)

☐ Add .gitignore

Choose which files not to track from a list of templates. [Learn more.](#)

☒ Choose a license

A license tells others what they can and can't do with your code. [Learn more.](#)

License: MIT License ▾

This will set  main as the default branch. Change the default name in your [settings](#).

Create repository

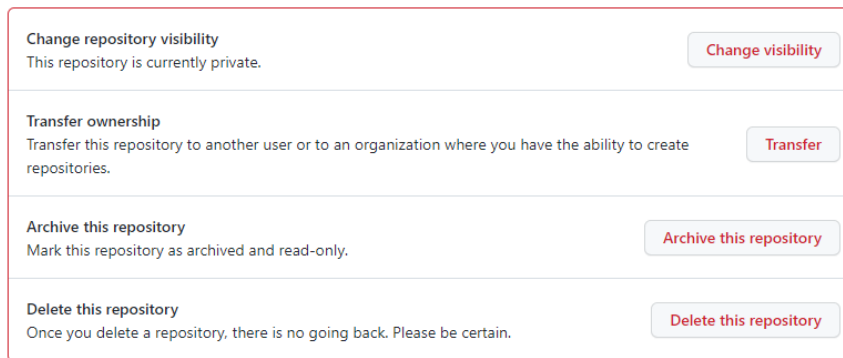

GitHub – Delete Repository

1. On GitHub.com, click on Repositories then click on the repository you would like to delete

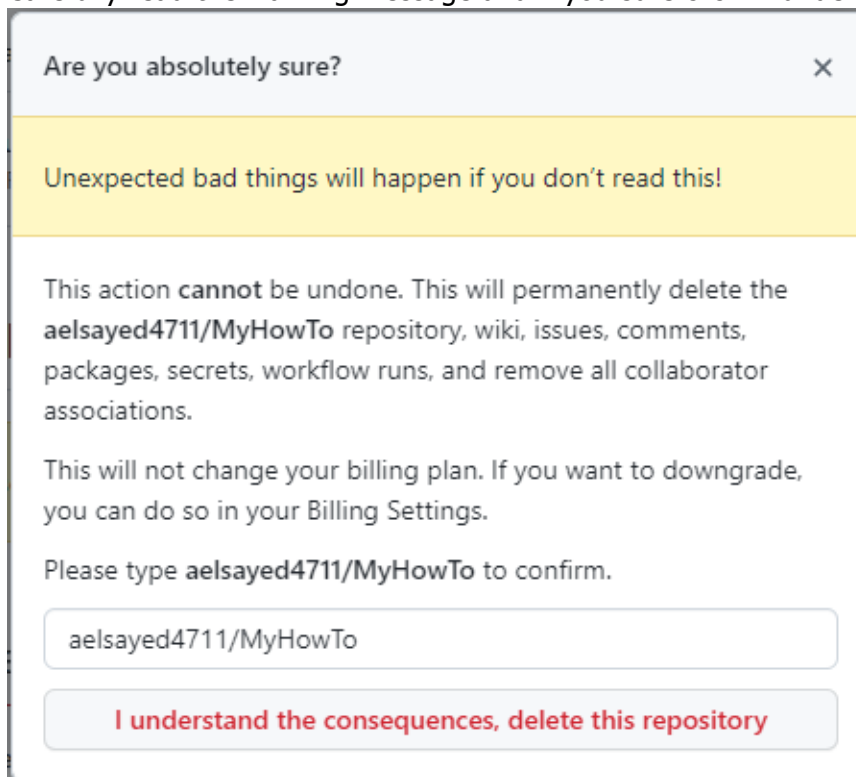

2. Click on "Setting" from the top menu

3. On setting page, scroll down to "Danger Zone" and click on "Delete this repository"

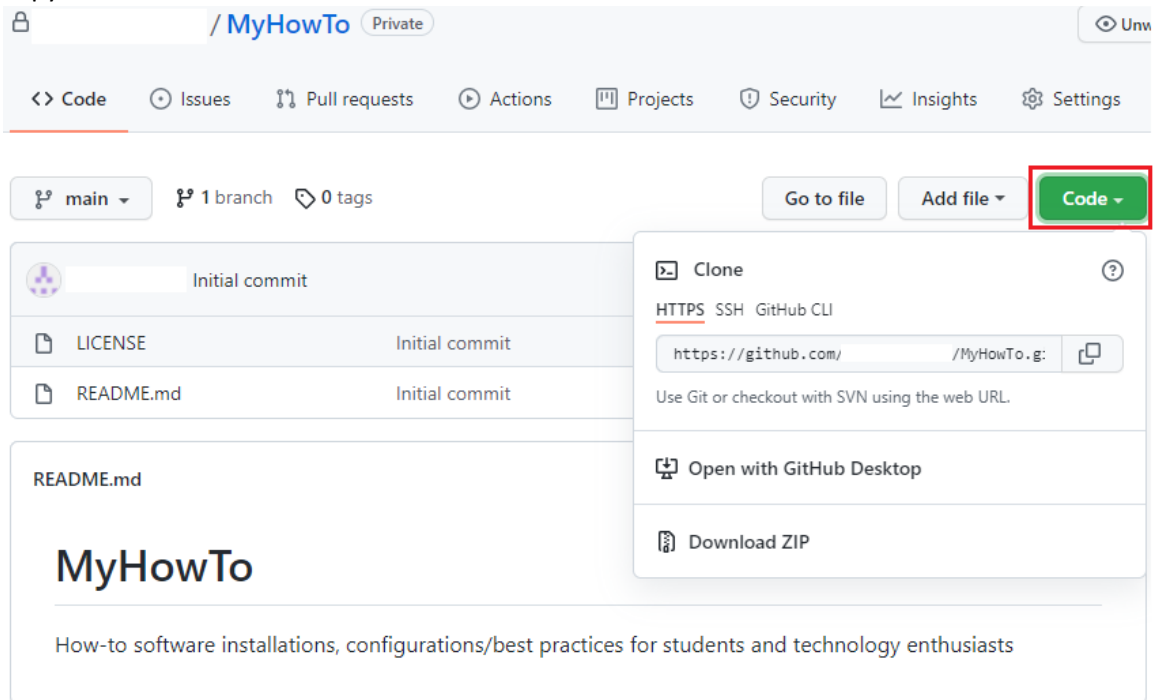

4. Carefully read the warning message and if you sure click "I understand..."

5. The repository is gone

GitHub – Clone Repository

1. To get URL for repository, from your repository main page click on “Code” and select HTTPS then copy the URL

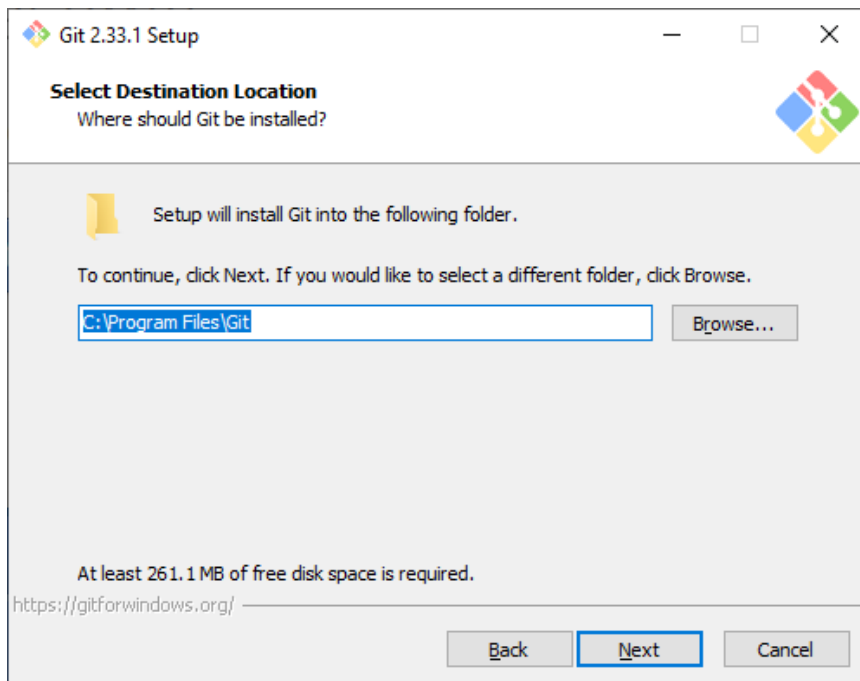

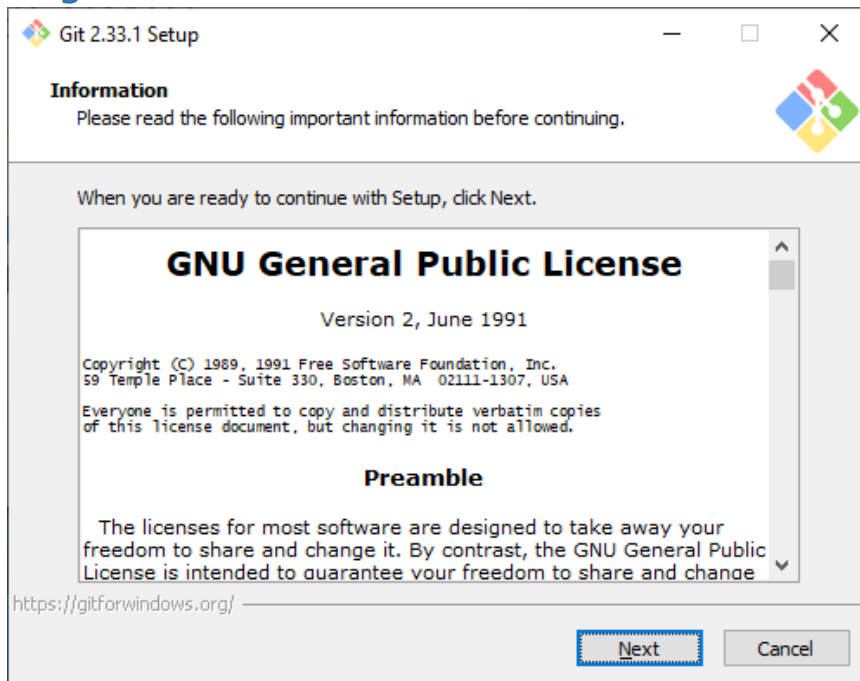

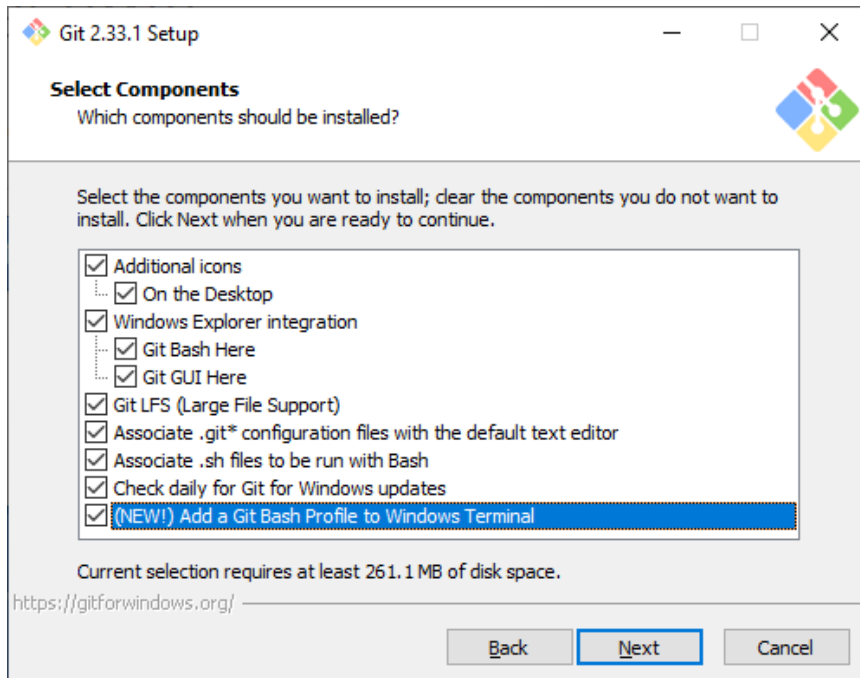

- 2.

Download Git

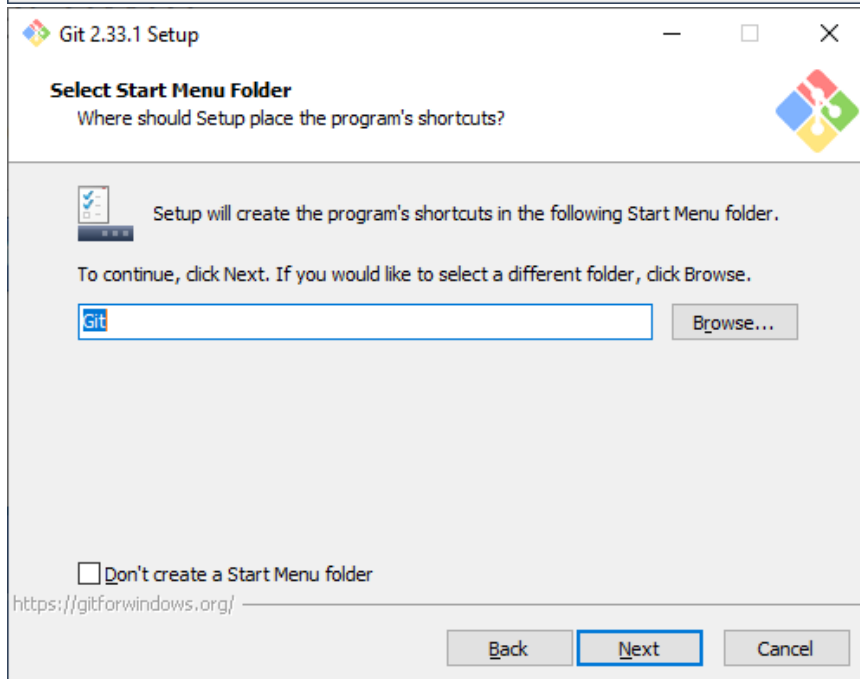

- Go to <https://gitforwindows.org/> and click download
-

Installing Git
